

Hiring Manager — People & Talent

Own end-to-end hiring for a fast-scaling AI product company

Company	MONA AI GmbH — applied AI agents for enterprise
Location	Saarbrücken (hybrid, 2–3 days on-site)
Team	People & Talent · reports to Head of People
Type	Full-time, permanent

About the role

We're hiring across engineering, GTM and operations and need a Hiring Manager who can run structured, fair and fast processes. You'll partner with technical and commercial leads, design scorecards, and protect candidate experience while keeping time-to-hire low.

What you'll do

- Run full-cycle recruiting: intake, sourcing strategy, screening, scheduling, offer and close.
- Design structured interview kits and scorecards with hiring leads; standardise rubrics.
- Own the ATS, pipeline hygiene and weekly hiring metrics (funnel, time-to-fill, pass-through).
- Coach interviewers on bias-aware, competency-based interviewing.
- Manage employer-branding basics and an inclusive, GDPR-compliant candidate experience.

Must-have qualifications

- 3+ years in-house recruiting or talent acquisition, ideally in tech/startups.
- Track record closing roles across functions (technical and non-technical).
- Hands-on with an ATS (e.g. Greenhouse, Personio, Join) and structured interviewing.
- Fluent German and English; strong written communication.
- Working knowledge of German labour-law basics and GDPR in recruiting.

Nice to have

- Experience hiring AI/ML or data talent.
- Familiarity with competency frameworks and work-sample assessments.
- Comfort building simple hiring dashboards.

Tools & stack

Personio / Join ATS · LinkedIn Recruiter · structured-interview scorecards · spreadsheet or BI for funnel metrics · basic German employment-law & GDPR knowledge.

What success looks like (first 6 months)

A documented, repeatable interview process per function; median time-to-hire down; interviewer scorecard adoption above 80%; positive candidate-experience feedback.

For the agent: Probe how they keep evaluation *structured and bias-aware*, how they measure funnel health, and how they handle German labour-law / GDPR constraints. Watch for over-reliance on 'gut feel' or vague metrics.
